

Kleever K2F *crystallization product: for already waxed floors*

Description:

Water based liquid for crystallize marble, concrete and terrazzo floors, it adds a very hard surface to the floor. It is not slippery like the wax based liquids. Also, adding a small amount of aluminium oxide, it can be used to crystallize granite floors after they have been polished with diamond.

→ Specially designed for already waxed floor treatment.

Instruction for use:

Shake well before use. Put a steel pad beneath the rubber base of the machine. Release a small quantity of the crystallization liquid onto the floor. We recommend you use the product dispenser fitted in the Coor&Kleever machines. Pass the machine over the liquid left to right and then up and down, until it is completely dry and a deep sheen appears in the surface. Repeat the operation until the entire area has been covered. Once the work is done, don't use ammonia cleaners, use tap water and a soft detergent. Avoid contact with metal parts.

Special Features:

Easy to use.

Greatly reduces the need for restoration.

Requires much less time as compared to traditional strip and wax methods.

Non scuffing.

Gives a mirror like polish.

Packaging

2 liter plastic container.

5 liter plastic container.
