

M88 PLUS

Grundschutz
Bio – Impregnation

Description **M88 Plus** Grundschutz Bio-Impregnator – water based without solvent, was especially developed for granite, marble and limestone. **M88 Plus** is best suited to impregnate polished and smoothed surfaces, to prevent grease, oil and water from penetrating the stone.

Application Before applying this impregnating product, make sure that the surface to protect has been thoroughly cleaned and that all residues of lime, cement and dirtiness have been removed. Once the stone and all joints are completely dry, Apply or spray in undiluted concentration on the clean, dry natural stone surface. Depending on the surface, repeated applications may be necessary.

Important: Make sure that all adjacent surfaces of glass, polished material, plastic, stainless steel and aluminium as well as furniture etc. are carefully covered. Switch off the floor heating.

Consumption 1 litre for approx. 10 to 15 square metres by brush, or approx. depending on the absorbency of the stone.

Notes

1. Provide for good ventilation during the use of the product.
2. Once the treated surface is completely dry, it does not cause any risk to human health.
3. Wear protective gloves and eye protectors.
4. Keep the product container tightly closed.
5. Keep the product inaccessible for children.
